

Auto Discovery

Con Auto-Discovery vamos a configurar zabbix para que automáticamente cada cierto tiempo, nos busque equipos nuevos en las redes que tengamos definidas y nos añada los mismos al sistema en función de ciertas condiciones.

Para configurar una regla de auto-discovery vamos a **Configuration→Actions** y en el desplegable **Event Source** seleccionamos **Discovery**

Para crear una nueva regla de descubrimiento pulsamos en el botón azul **Create Action**. Asignamos un nombre y en la casilla **New Condition** seleccionaremos “Valor recibido, igual que” y rellenaremos el valor Linux, y pulsaremos al enlace azul “Agregar”. Repetimos el proceso para agregar el resto de condiciones

The screenshot shows the Zabbix web interface. The top navigation bar includes 'Monitoring', 'Inventory', 'Reports', 'Configuration', and 'Administration'. Below this, a sub-navigation bar has 'Host groups', 'Templates', 'Hosts', 'Maintenance', 'Actions', 'Event correlation', 'Discovery', and 'Services'. The main content area is titled 'Actions' and has two tabs: 'Action' and 'Operations'. The 'New Condition' tab is active. It contains a form for creating a new condition. The 'Name' field is 'Descubrir equipos Windows'. The 'Type of calculation' is 'And/Or'. There are two conditions listed: 'A' with 'Received value like Windows' and 'B' with 'Discovery status = Up'. Below the conditions, there is a 'New condition' section with a dropdown for 'Discovery status', an equals sign, and a dropdown for 'Up'. There are 'Add' and 'Cancel' buttons at the bottom. The 'Enabled' checkbox is checked.

Ahora pulsamos sobre la pestaña acciones y configuramos que acciones queremos

The screenshot shows the Zabbix web interface. The top navigation bar includes 'Monitoring', 'Inventory', 'Reports', 'Configuration', and 'Administration'. Below this, a sub-navigation bar has 'Host groups', 'Templates', 'Hosts', 'Maintenance', 'Actions', 'Event correlation', 'Discovery', and 'Services'. The main content area is titled 'Actions' and has two tabs: 'Action' and 'Operations'. The 'Operations' tab is active. It contains a form for configuring actions. The 'Default subject' field is 'Discovery: {DISCOVERY.DEVICE.STATUS} {DISCOVERY.DEVICE.IPADDRESS}'. The 'Default message' field contains a template for the discovery rule. Below the message, there is a table for 'Operations' with two rows: 'Add to host groups: Servidores Windows' and 'Link to templates: Template OS Windows'. There are 'Add' and 'Cancel' buttons at the bottom. The 'Details' and 'Action' columns are visible.

Ahora sólo faltaría definir las reglas de descubrimiento. Para ello vamos a **Configuration→Discovery**
Una vez todo configurado es cuando apretamos el botón azul **Add**
