

[zabbix,snmp](#)

Monitorizar un Host por SNMP

Entramos en el frontal Web de Zabbix → Menu configuration → Hosts

Pulsamos en el botón de la esquina superior derecha **Create host**

The screenshot shows the Zabbix web interface for creating a new host. The top navigation bar includes 'Monitoring', 'Inventory', 'Reports', 'Configuration', and 'Administration'. The 'Hosts' section is active, and the 'Create host' button is visible in the top right. The form includes fields for 'Host name', 'Visible name', and 'Groups'. The 'Groups' section shows a list of 'Other groups' including 'Aplicaciones', 'Backup', 'Cabinas', and several 'clusterpro' groups. The 'Agent interfaces' section shows a table with columns for 'IP ADDRESS', 'DNS NAME', 'CONNECT TO', 'PORT', and 'DEFAULT'. The 'SNMP interfaces', 'JMX interfaces', and 'IPMI interfaces' sections each have an 'Add' button. The 'Description' field is a large text area. The 'Monitored by proxy' dropdown is set to '(no proxy)'. The 'Enabled' checkbox is checked. The 'Add' and 'Cancel' buttons are at the bottom.
