

[zabbix,snmp](#)

Monitorizar un Host por SNMP

Entramos en el frontal Web de Zabbix → Menu configuration → Hosts

Pulsamos en el botón de la esquina superior derecha **Create host**

En el campo host name ponemos en nombre que queramos darle al host

En la casilla groups seleccionamos o creamos el grupo donde queremos encuadrarlo.

Como sólo vamos a monitorizarlo por snmp . Pinchamos en remove del **agent interfaces** y pulsamos en add de **SNMP interfaces**

The screenshot shows the 'Create host' form in Zabbix. The 'Host name' field is empty. The 'Visible name' field is also empty. The 'Groups' section has 'In groups' and 'Other groups' lists. The 'Agent interfaces' section has a table with one entry (127.0.0.1) and a 'Remove' button. The 'SNMP interfaces' section has an 'Add' button. The 'JMX interfaces' and 'IPMI interfaces' sections also have 'Add' buttons. The 'Description' field is empty. The 'Monitored by proxy' dropdown is set to '(no proxy)'. The 'Enabled' checkbox is checked. The 'Add' and 'Cancel' buttons are at the bottom.
