

# Vcenter Operation Manager

El vcenter operation managers es un appliance que se distribuye en formato ovf y que podemos desplegar en nuestra infraestructura para obtener datos de salud y rendimiento de la misma.

Para su instalación necesitamos disponer de un cluster con DRS y de un pool de ip

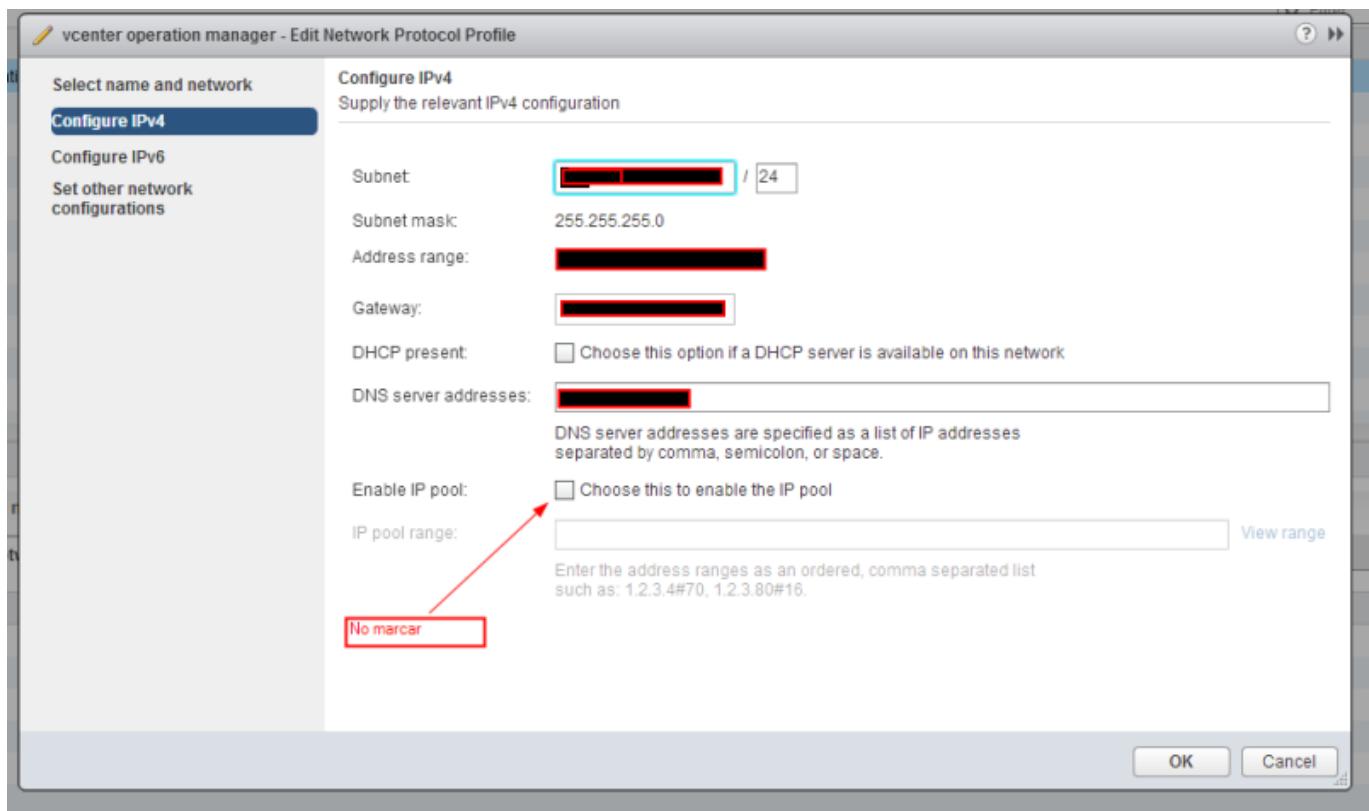

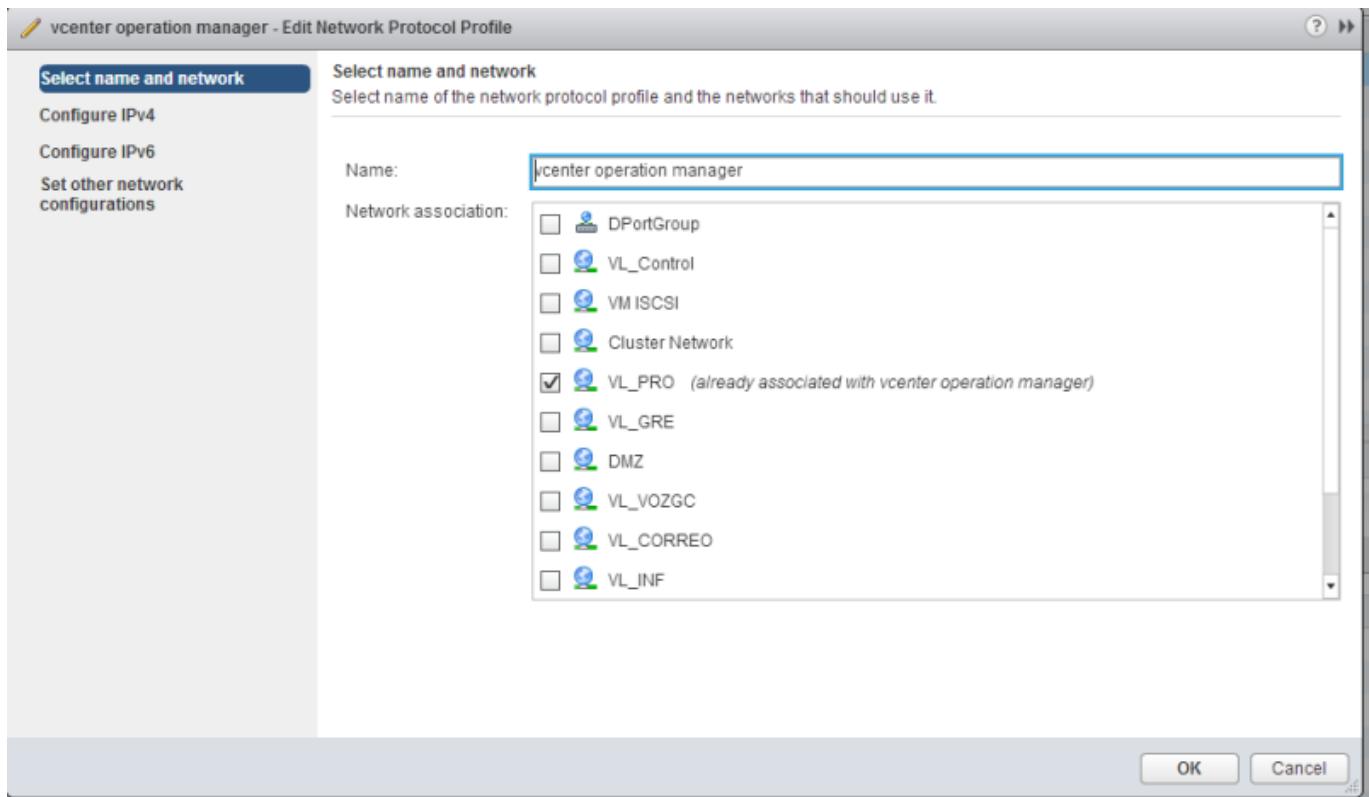

previamente a despliegue creamos el ip pool de la siguiente manera. Desde nuestro webclient

The screenshot shows the 'Network Protocol Profiles' section of the Vcenter Operation Manager web interface. The top navigation bar includes 'Getting Started', 'Summary', 'Monitor', 'Manage' (which is selected), and 'Related Objects'. Below this, a sub-navigation bar shows tabs for 'Alarm Definitions', 'Tags', 'Permissions', 'Network Protocol Profiles' (which is selected and highlighted in blue), and 'Scheduled Tasks'. The main content area is titled 'Network Protocol Profiles' and contains a table with one item:

Name	Associated Networks Count
vcenter operation manager	1

Below the table, a message states 'No network protocol profile selected'. A sub-section below this message has tabs for 'Associated Networks' (selected), 'IPv4', 'IPv6', and 'Other Network Configuration'. The 'Associated Networks' tab displays the message 'No network protocol profile selected'.

No marcar la casilla de activar el pool

Una vez creado el ip pool, procedemos a desplegar el appliance. Aceptamos la licencia y en mi caso les puse una dirección ip fija.

Una vez desplegado el appliance tenemos que arrancar las dos MV que crea, y proceder a terminar de configurar el Vcenter Operation Manager bien desde [https://ip\\_vcenteroperation/admin/](https://ip_vcenteroperation/admin/) o desde el icono que se crea en el vcenter

y terminar la configuración accedemos o bien desde
