

Vcenter Operation Manager

El vcenter operation managers es un appliance que se distribuye en formato ovf y que podemos desplegar en nuestra infraestructura para obtener datos de salud y rendimiento de la misma.

Para su instalación necesitamos disponer de un cluster con DRS y de un pool de ip

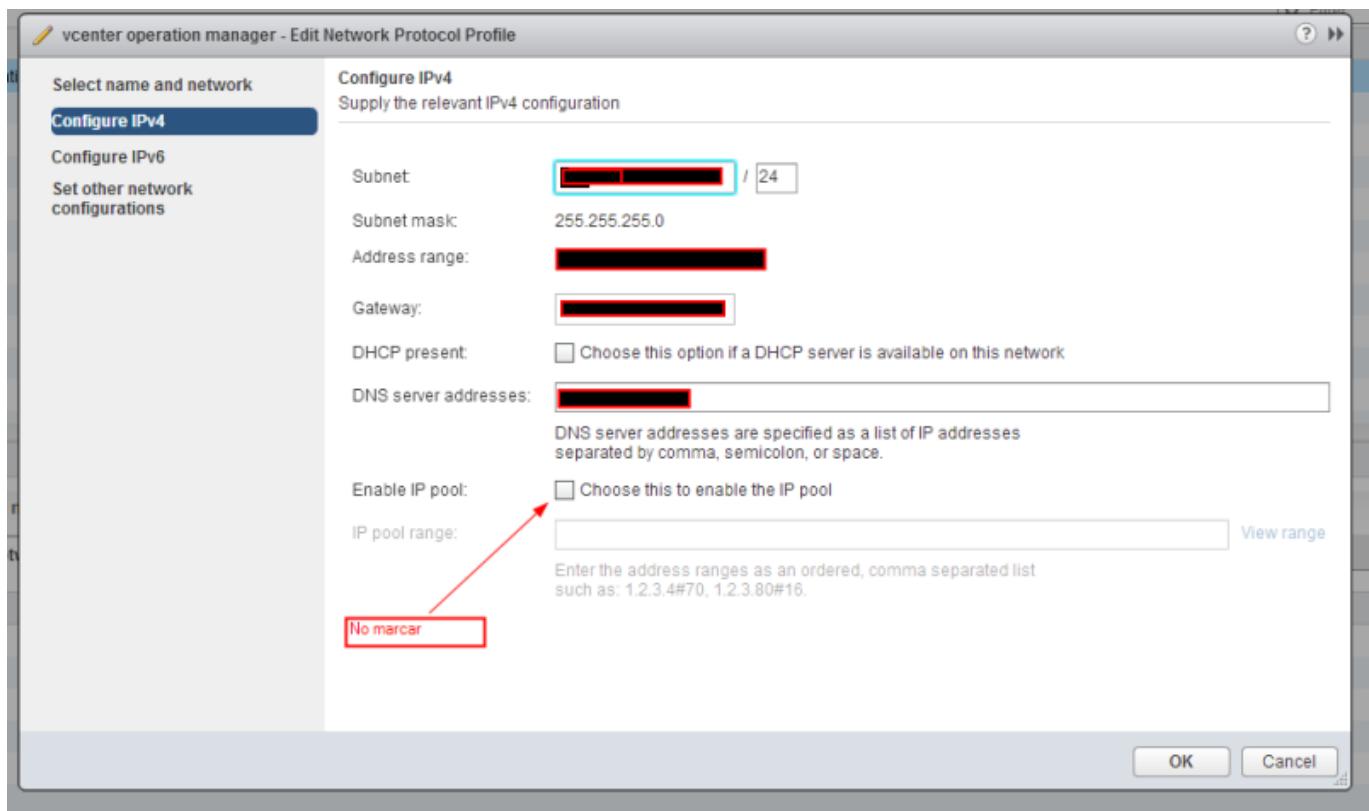

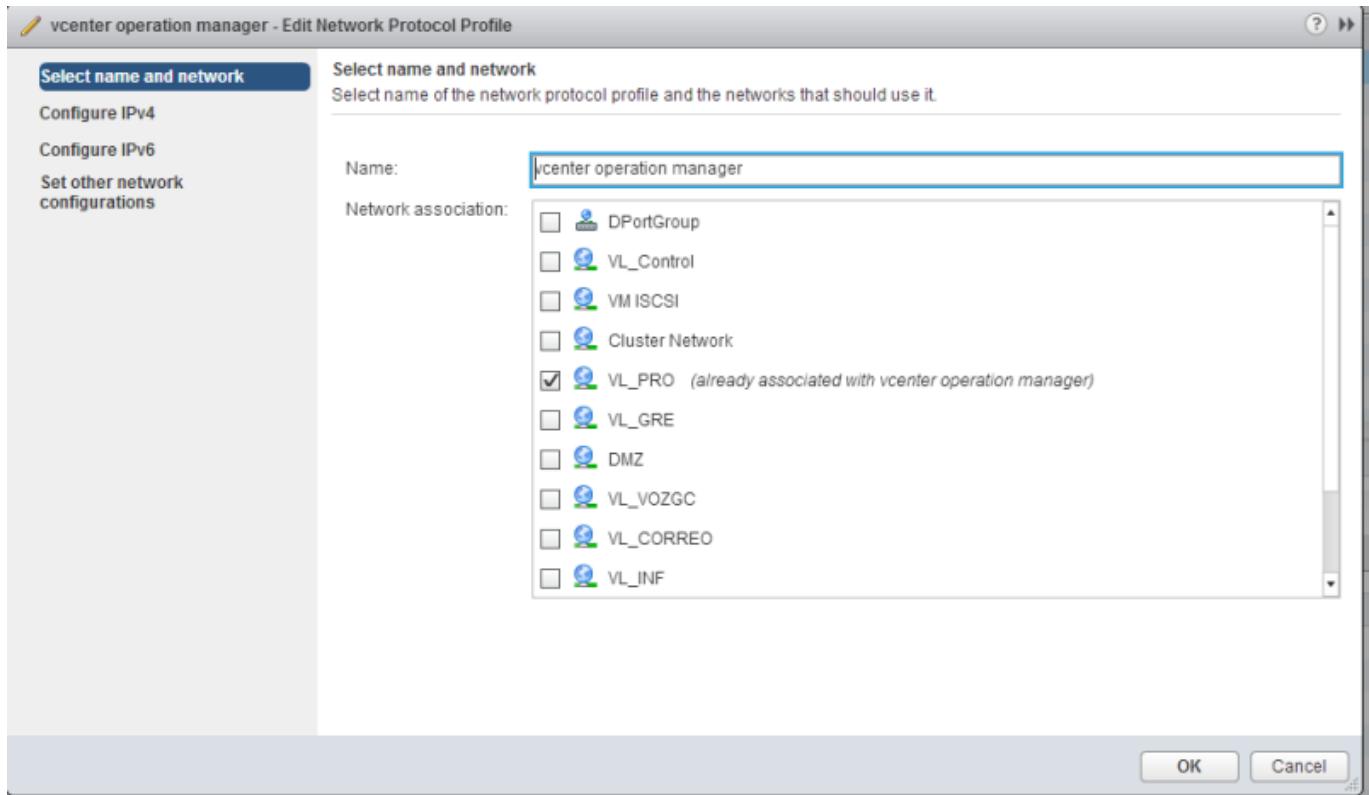

previamente a despliegue creamos el ip pool de la siguiente manera. Desde nuestro webclient

The screenshot shows the 'Network Protocol Profiles' section of the Vcenter Operation Manager web interface. The top navigation bar includes 'Getting Started', 'Summary', 'Monitor', 'Manage' (which is selected), and 'Related Objects'. Below this, a sub-navigation bar shows tabs for 'Alarm Definitions', 'Tags', 'Permissions', 'Network Protocol Profiles' (which is selected and highlighted in blue), and 'Scheduled Tasks'. The main content area is titled 'Network Protocol Profiles' and contains a table with one item:

Name	Associated Networks Count
vcenter operation manager	1

Below the table, a message states 'No network protocol profile selected'. At the bottom of the interface, there are tabs for 'Associated Networks', 'IPv4', 'IPv6', and 'Other Network Configuration', with 'Associated Networks' being the active tab. A note below the tabs says 'No network protocol profile selected'.

No marcar la casilla de activar el pool

Una vez creado el ip pool, procedemos a desplegar el appliance. Aceptamos la licencia y en mi caso les puse una dirección ip fija.

Una vez desplegado el appliance tenemos que arrancar las dos MV que crea, y proceder a terminar de configurar el Vcenter Operation Manager bien desde https://ip_vcenteroperation/admin/ o desde el icono que se crea en el vcenter

The screenshot shows the vSphere Web Client interface. On the left, there's a navigation sidebar with options like vCenter, Rules and Profiles, vCenter Orchestrator, Administration, Tasks, Log Browser, Events, Tags, New Search, and Saved Searches. The main content area is divided into three sections: Inventories, Monitoring, and Administration. In the Monitoring section, there are icons for Task Console, Event Console, Host Profiles, VM Storage Policies, Customization Specification Manager, and vCenter Operations Manager. A red arrow points to the vCenter Operations Manager icon.

This screenshot shows the vSphere Web Client with the vCenter Operations Manager application selected in the navigation sidebar. The main content area displays the "vCenter Operations Manager" application details, including its version (5.8.1) and build number (Build 1637685). A search bar labeled "Filter" is also visible.

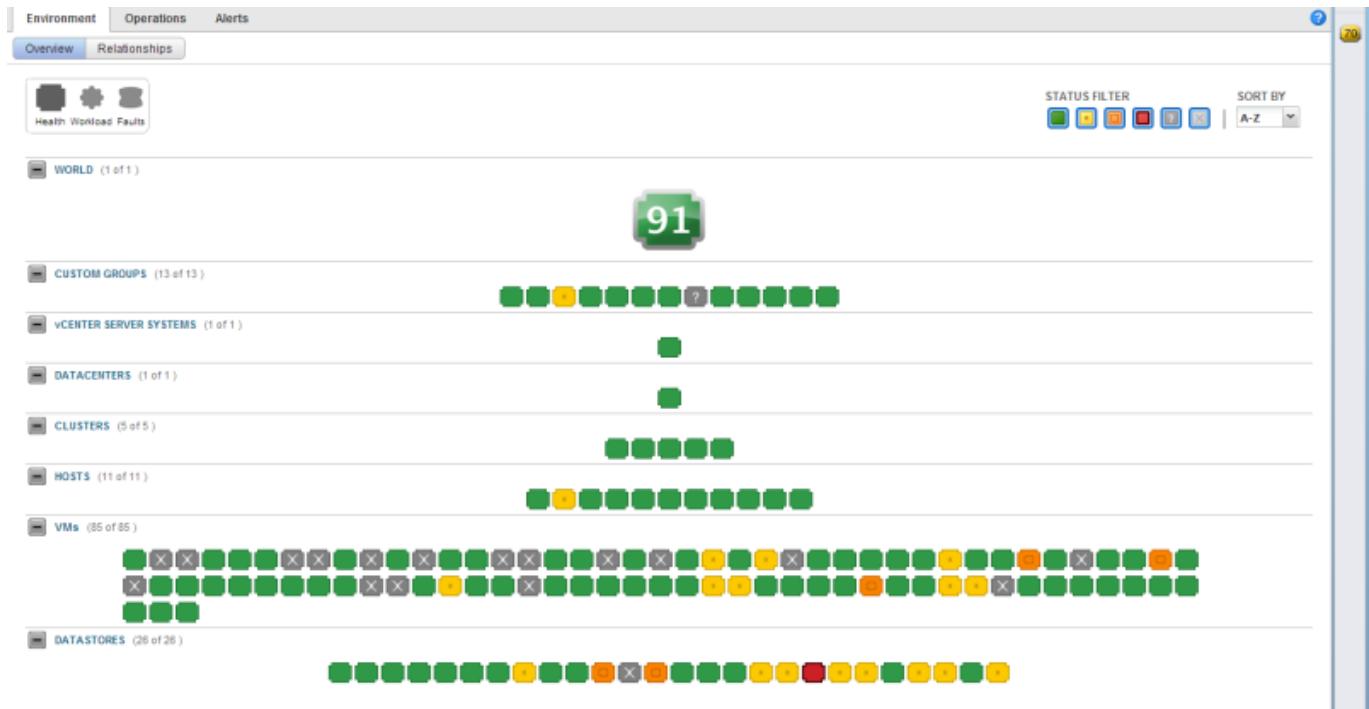

Nos validamos en el vCenter Operations Manager la primera vez con usuario y clave → **admin** y lo terminamos de configurar cambiando las contraseñas e indicando la dirección de nuestro vcenter standard

The screenshot shows the vCenter Operations Manager Administration interface. At the top, it says "vCenter Operations Manager Administration" and "Version 5.8.1, Build 1637685". Below that is the "Initial Setup Wizard" window. The left pane of the wizard is titled "Virtual Appliance Details" and includes links for Change Passwords, Specify vCenter Server, Import Data, and Linked VC Registration. The right pane is titled "Provide the details of the vCenter Operations Manager virtual appliance." It contains a checkbox "Use hosting vCenter Server details" which is checked. Below it are fields for "Hosting vCenter Server address", "Hosting vCenter Server user", and "Hosting vCenter Server password". At the bottom of the wizard window are "Help", "< Back", and "Next >" buttons.

el usuario root trae como clave por defecto vmware

Una vez terminado de configurar ya sólo tenemos que entrar en <https://mivcenteroperations/vcops-vsphere/> y una vez validados
